

I support RM-10352 as this is something that has been needed for a long time now. I have been active on the 160 meter band since the early 60's and at that time the band was only 25 Khz. total with power limitations. As the restrictions were repealed and the band expanded, no thought was given to segregation of various modes as on all other HF bands. This has created havoc as the popularity of the 160 Meter band has vastly increased as well as new digital modes have come into existence. RM-10352 is good for everybody with no downside as I see it. Its a Win-Win situation long in coming!
